

# Real-Edwards Conservation & Reclamation District

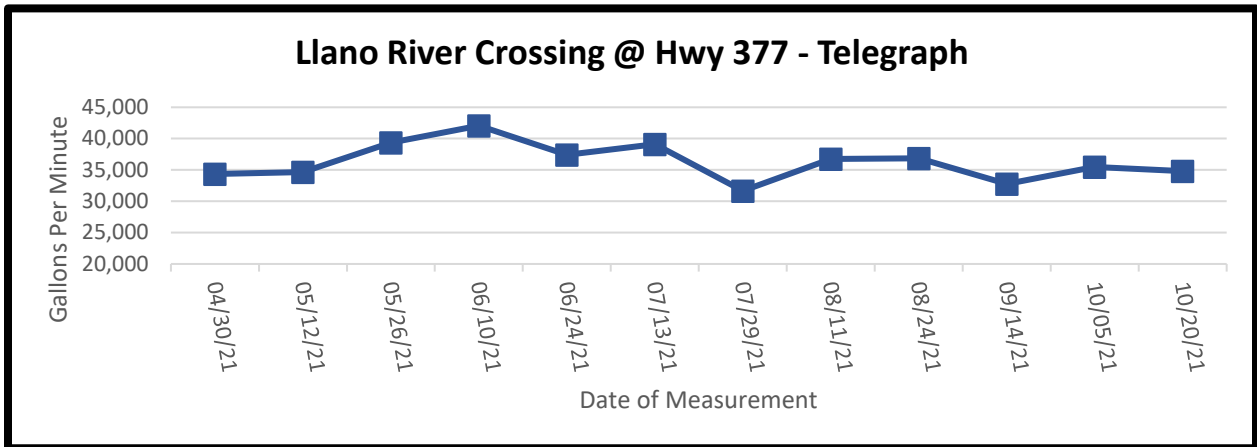

## River Flows

All river flow measurements were taken on October 20, 2021. Some locations around the area received some additional rainfall on the 13<sup>th</sup> of October which created some small rises in a few river locations. Remember, harvesting rainwater is a great solution for a future dry spell or as supplemental watering for your garden.

**REMINDER:** Both Edwards and Real counties are in a Stage 3 Drought status. Now is the time to begin conserving water by using what you have efficiently.

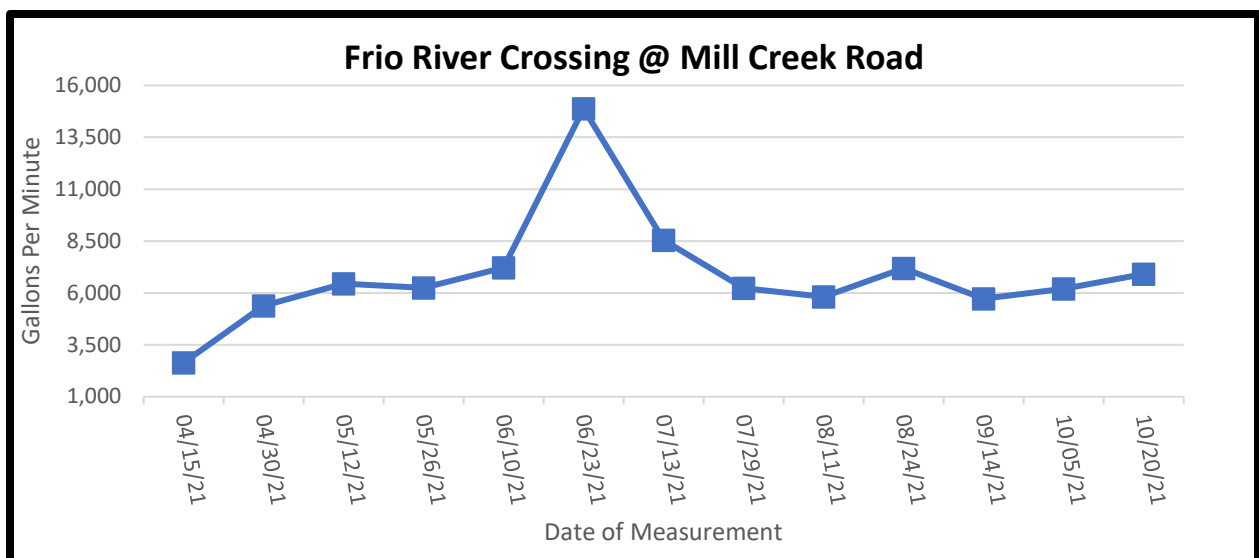

The Nueces River crossing at Highway 55 south of Camp Wood near the dam had an increased flow of 29,471 gpm, while last reading was 25,861 gpm. At the McDonald Road crossing north of Camp Wood, the Nueces River showed an increased flow of 16,247 gpm from the last measurement 13,306 gpm.

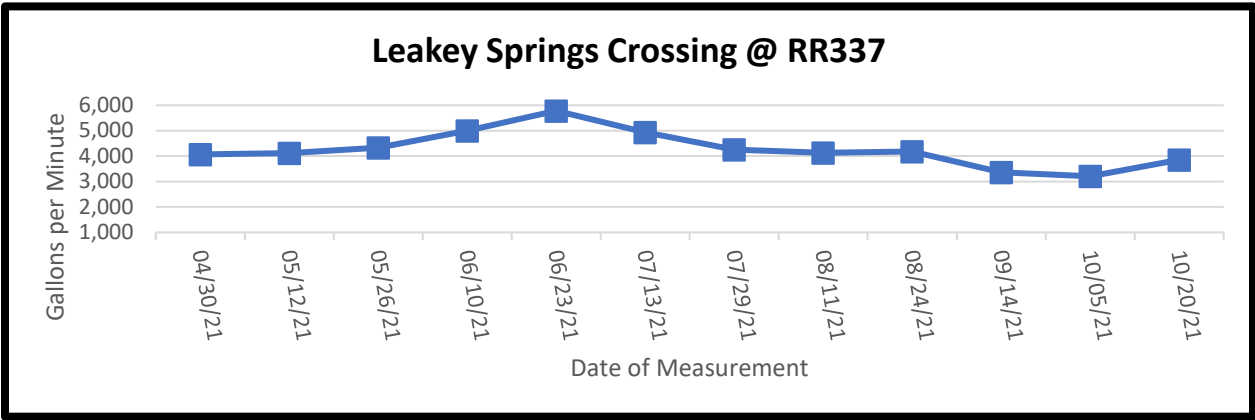

The South Llano River dips into northern Edwards County where it borders Kimble County and crosses Highway 377 twice where flows can be measured. For the crossing at Telegraph, the South Llano revealed a decreased flow of 34,796 gpm from last measurement of 35,492 gpm. The Evergreen School crossing also showed a decrease with a reading of 27,228 gpm compared to 30,010 gpm on October 5<sup>th</sup>.

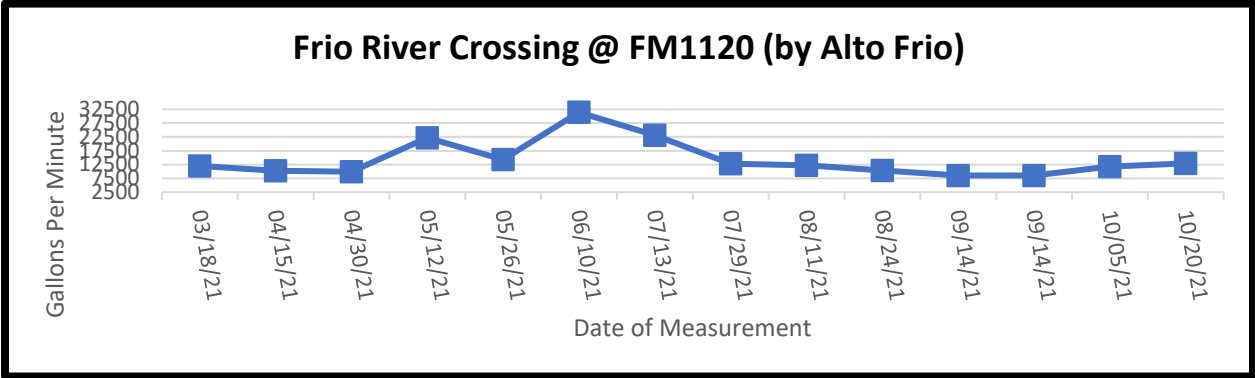

On Ranch Road 336 approximately 10 miles north of Leakey, Kent Creek flows into the west prong of the Frio River. Kent Creek crossing showed a decrease in flow reading of 985 compared to last measurement 1,974 gpm. Also, on RR336 is the Rancho Real subdivision where the west prong of the Frio River meanders toward Leakey. The first crossing in Rancho Real showed a decrease reading of 4,945 gpm compared to last reading of 6,387 gpm.

On U.S. Highway 83, north of Leakey, Mill Creek Road crosses the east prong of the Frio River before it merges with the west prong of the Frio River. Mill Creek crossing showed an increased flow of 6,907 gpm compared to last reading of 6,207 gpm.

Moving slightly east on Ranch Road 337 past the Leakey Floral cemetery is the serene Leakey Springs tributary of the Frio River. This crossing revealed an increase in flow of 3,856 gpm compared to last flow rate of 3,207 gpm.

Traveling east on FM 1120 past the Alto Frio Baptist Encampment (also known as Fulgham’s Crossing), the flow showed an increase flow measurement of 12,902 gpm compared to an October 5<sup>th</sup> flow rate 11,801 gpm.
