

Real-Edwards Conservation & Reclamation District River Flows

All river flow measurements were taken on November 11, 2021. Most of the changes in the river flows were insignificant in either direction. Remember, harvesting rainwater is a great solution for a future dry spell or as supplemental watering for your garden.

REMINDER: Both Edwards and Real counties *are in a Stage 3 Drought status*. Now is the time to begin conserving water by using what you have efficiently.

The Nueces River crossing at Highway 55 south of Camp Wood near the dam had a decreased flow of 24,304 gpm, while last reading was 29,471 gpm. At the McDonald Road crossing north of Camp Wood, the Nueces River showed decreased flow of 15,738 gpm from the last measurement 16,247 gpm.

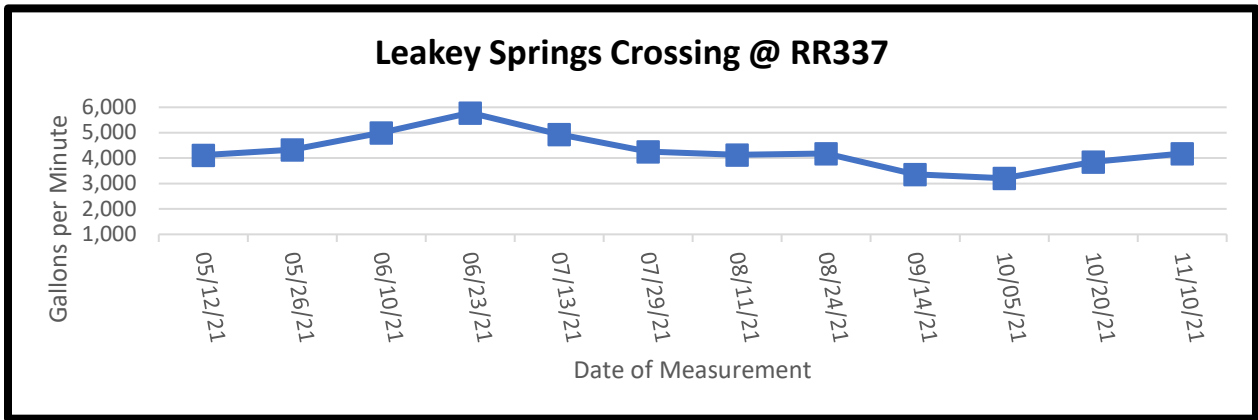

The South Llano River dips into northern Edwards County where it borders Kimble County and crosses Highway 377 twice where flows can be measured. For the crossing at Telegraph, the South Llano revealed a slight increased flow of 34,919 gpm compared to the last measurement of 34,796 gpm. The Evergreen School crossing also showed a more sizeable increase with a reading of 30,340 gpm compared to 27,228 gpm on October 20th.

On Ranch Road 336 approximately 10 miles north of Leakey, Kent Creek flows into the west prong of the Frio River. Kent Creek crossing showed a decrease in flow reading of 864 compared to last measurement 985 gpm. Also, on RR336 is the Rancho Real subdivision where the west prong of the Frio River meanders toward Leakey. The first crossing in Rancho Real showed an increase flow of 6,495 gpm compared to last reading of 4,945 gpm.

On U.S. Highway 83, north of Leakey, Mill Creek Road crosses the east prong of the Frio River before it merges with the west prong of the Frio River. Mill Creek crossing showed a slight decreased flow of 6,775 gpm compared to last reading of 6,907 gpm.

Moving slightly east on Ranch Road 337 past the Leakey Floral cemetery is the serene Leakey Springs tributary of the Frio River. This crossing revealed an increase in flow of 4,177 gpm compared to last flow rate of 3,856 gpm.

Traveling east on FM 1120 past the Alto Frio Baptist Encampment (also known as Fulgham’s Crossing), the flow showed a sizeable decrease in flow measurement of 11,285 gpm compared to an October 20th flow rate 12,902 gpm.
