

Real-Edwards Conservation & Reclamation District River Flows

All river flow measurements were taken on December 8, 2021. All of the river crossings except for one showed flows that decreased. Remember, harvesting rainwater is a great solution for a future dry spell or as supplemental watering for your garden.

REMINDER: Both Edwards and Real counties *are in a Stage 3 Drought status*. Now is the time to begin conserving water by using what you have efficiently.

The Nueces River crossing at Highway 55 south of Camp Wood near the dam had a decreased flow of 23,029 gpm, compared to the last reading of 24,304 gpm. At the McDonald Road crossing north of Camp Wood, the Nueces River showed a decreased flow of 13,740 gpm from the last measurement 15,738 gpm.

The South Llano River dips into northern Edwards County where it borders Kimble County and crosses Highway 377 twice where flows can be measured. For the crossing at Telegraph, the South Llano revealed a decreased flow of 33,425 gpm compared to the last measurement of 34,919 gpm. The Evergreen School crossing also showed a decrease with a reading of 29,402 gpm compared to 30,340 gpm on November 10th.

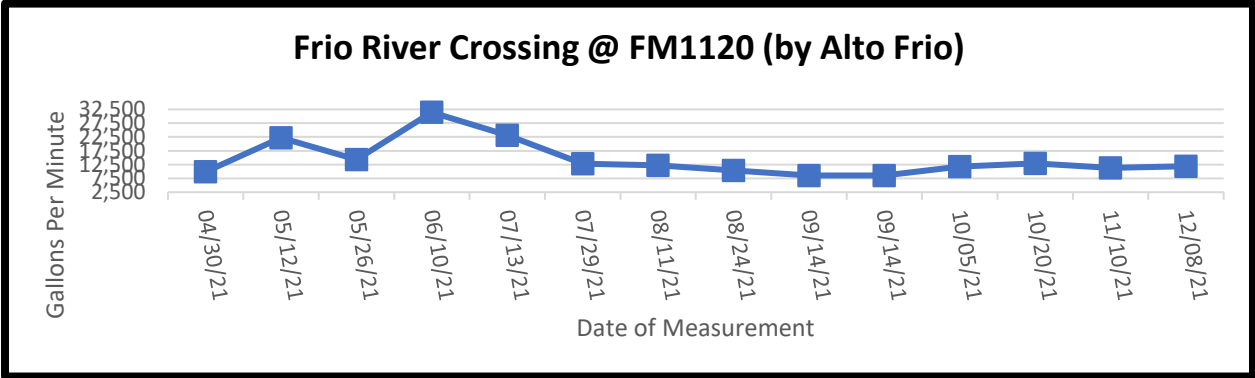

On Ranch Road 336 approximately 10 miles north of Leakey, Kent Creek flows into the west prong of the Frio River. Kent Creek crossing showed a decrease in flow reading of 760 compared to the last measurement of 864 gpm. Also, on RR336 is the Rancho Real subdivision where the west prong of the Frio River meanders toward Leakey. The first crossing in Rancho Real showed a decreased flow of 5,212 gpm compared to the last reading of 6,495 gpm.

On U.S. Highway 83, north of Leakey, Mill Creek Road crosses the east prong of the Frio River before it merges with the west prong of the Frio River. Mill Creek crossing showed a decreased flow of 5,212 gpm compared to the last reading of 6,495 gpm.

Moving slightly east on Ranch Road 337 past the Leakey Floral cemetery is the serene Leakey Springs tributary of the Frio River. This crossing revealed a slight decreased flow of 4,092 gpm compared to the last flow rate of 4177 gpm.

Traveling east on FM 1120 past the Alto Frio Baptist Encampment (also known as Fulgham’s Crossing), interestingly showed an increased flow measurement of 11,876 gpm compared to a November 10th flow rate 11,285 gpm.
